ALAN LOKAS

WEB DEVELOPER

My name is Alan Lokas and I'm a passionate programmer. I specialize in JavaScript, HTML, CSS, as well as the popular front-end framework React. In addition, I have a deep understanding of back-end technologies such as Node.js and databases like SQL, MySQL, and MongoDB.

Continuous learning and improvement are important to me. I'm always on the trail of the latest trends and technologies in programming and I never miss an opportunity for improvement. My passion for programming exceeds the basic job requirements, I regularly invest extra time to expand my knowledge and skills.

As a person, I'm known for being independent and solving problems, but I still appreciate the value of teamwork. I'm extremely motivated, dedicated, and always ready to accept new challenges.
